Just add a link to our channel or our site Q: ArcGIS Network Analyst: Way to export raster attributes as a point table (i.e., point shapefiles)? I've got a need to extract data values from a raster (it's a land cover map) and save it as a point table. I'm using Network Analyst to make a Network Linkages analysis, which will export two raster layers into one shapefile (one representing land cover areas, the other representing "links" between the land cover cells). I'd like to save the links layer as a point table (because point layers are simpler to manipulate later on). Is there a way to export the attributes of a raster as a point table? A: Another way is to export the table to shapefile, but you'll need to import the shapefile back to the table (then you can edit the table). Tools and techniques for obtaining DNA sequence information are known in the art. See, e.g., Sambrook et al., Molecular Cloning: A Laboratory Manual, 2 Ed., Vols. 1-3, Cold Spring Harbor Laboratory Press, Cold Spring Harbor, N.Y., 1989.
